

## Beauty of Vegetative Variety, Convenience of Seed

- ✓ Excellent heat, drought and salt tolerance
- ✓ Low nitrogen fertility and overall lower maintenance requirements
- ✓ Extremely wear resistant with exceptional turf density and uniformity

**Cathay** *Zoysia japonica* is widely recognized as an improved seeded zoysiagrass. It is an excellent choice for golf courses, athletic fields, and landscapes in both the Transition and warm-season areas. **Cathay** has improved turf quality and playability, good density, extreme wear resistance, moderate fine leaf texture and uniformity. **Cathay** Brand is great for any low maintenance project, or can be maintained on golf course fairways and rough areas.

Cathay seeded on entire course in Fiji

### ADVANTAGES OF USING CATHAY

- Convenience of seed rather than shipping and handling live plants
- Higher purity and germination rates
- Easily adaptable to various types of soil
- Improved shade and disease tolerance
- Deep green color, medium-fine leaf texture

**Reduced Dormancy for Enhanced Germination:** **Cathay** is treated for enhanced germination. **Cathay** boasts germination rates over 70 and 80% due to a patented material. **Cathay** seed has been made to reduce dormancy to speed up establishment.

**Seeding Rate:** Broadcast or slit-seed in two directions at least 2-4 lb/1,000 ft<sup>2</sup> (10-20 g/m<sup>2</sup>). The seed requires soil temperatures above 70°F (21°C), sunlight, fertilizer and frequent irrigation during initial establishment.
