

ATHLETIC PRO® II

Mixture

SPECIAL FEATURES

- Superior performance on lower maintenance athletic fields
- Excellent cold hardiness
- Excellent wear tolerance and recuperative potential
- Very good resistance to diseases common to lower maintenance turf

FORMULA

50% 2 of 4 Kentucky bluegrasses
(Blue Chip, Everest, Liberator, NuBlue)

50% 2 of 3 perennial ryegrasses
(Accent, Caddieshack II, Top Gun II)

AGRONOMIC CHARACTERISTICS

Athletic Pro II is tailored to athletic fields, playgrounds, golf course roughs, or other high traffic areas that receive less-than-optimal maintenance, where superior quality and long-term durability are desired. **Athletic Pro II** performs well at 1- $\frac{3}{4}$ inch mowing heights and should be maintained above 2 inch under restricted moisture and fertility programs.

The bluegrasses in **Athletic Pro II** were combined for wear tolerance, vigorous recuperative ability, and broad based disease resistance while maintaining high summer density. These varieties exhibit excellent seedling vigor and sod forming characteristics for superior performance in new establishment and overseeding programs.

Perennial ryegrasses provide rapid establishment, excellent wear resistance and recuperative ability, plus a unique combination of superior winter hardiness and transition zone adaptation. The perennial ryegrasses are endophyte enhanced for excellent persistence and insect resistance, good spring green-up and resistance to pink snow mold, net blotch, and dollar spot.

SUGGESTED SEEDING RATES

New establishment 175 - 225 lbs./acre

Overseeding 75 - 125 lbs./acre
