Overseeder II is a vigorous perennial ryegrass (Lolium perenne) blend designed for rapid results on golf courses, athletic fields, and premium landscapes. It has a high degree of traffic tolerance and is better adapted to compacted soils than other turfgrasses. It performs well on sports turf and other high wear areas. Overseeder II produces high shoot density and upright growth habit and can be mowed to 0.5 inch or less. It provides excellent playability on golf course tees and fairways and other elite sports turf.

Overseeder II is as beautiful as it is tough. It is an excellent choice for the most elite lawns, landscapes, and sports turf. Quick germination and high seedling vigor make Overseeder II ideal for establishment and renovation of turfgrass prone to thinning by pests and environmental stress. It is competitive against Poa annua and is an excellent choice for repairing turf affected by drought, winter damage, or summer patch and necrotic ringspot diseases.

The perennial ryegrass varieties chosen for the Overseeder II blend contain a high level of beneficial endophytic fungus. As part of an integrated pest management program, Overseeder II resists damage caused by leaf and shoot-feeding insects such as billbugs, chinch bugs, and sod webworms. All the components have improved heat tolerance and brown patch resistance for better Transition Zone adaptation. Overseeder II is valuable for interseeding older bluegrass, ryegrass, fine fescue or bermudagrass lawns and sports turf.

**Seeding Rate:**
For permanent turf establishment: 10 lb/1,000 ft²
For interseeding into existing turf: 2-5 lb/1,000 ft²
Dormant bermudagrass overseeding:
Greens: 25-40 lb/1,000 ft²
Fairways: 400+ lb/acre
