

TeeOne (T-1) Creeping Bentgrass

T-1 is the first of a new generation of creeping bentgrass, with qualities never before seen in golf turf:

- “Championship greens without the championship maintenance”
- “The Fore!giving Bent”
- Ball marks, divots heal rapidly
- Dollar spot resistance equal to the best
- Rich green color
- Makes visible gains on *Poa annua* each year
- Great on GREENS, TEES and FAIRWAYS!

CHARACTERISTICS:

Tenacious ground coverage – The single biggest factor that sets **T-1** apart is ground coverage. **T-1** retains ground coverage under some incredibly tough growing conditions.

Aggressive against Poa – At Jacklin Seed, we test every single bent strain in our breeding program against *Poa annua*. If it can't hold up against *Poa*, we pitch it. All of the plants that went into **T-1** excelled at keeping *Poa* at bay. In fact, they made visible gains against *Poa* every year.

TESTIMONIAL: Westmoreland CC, Wilmette, IL

"I feel I can gain a strong competitive edge against Poa with T-1 on my course. I'm excited about its possibilities with low fertility management. I've put it through the paces here at Westmoreland and have found no chinks in its armor."

– Frank Heery, golf superintendent

T-1 is the “Fore!giving Bent” – Unlike some earlier bents, **T-1** was bred and optimized with the mid-budget golf course in mind. **T-1** provides tournament-quality golf for every golf course and forgives even when climate or cultural practices are not ideal.

Turf growth habit – **T-1** sets a new standard for bentgrass tiller density, providing a rich, luxurious putting surface. Yet it is remarkably easy to manage.
