**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a manner that will contact workers or other persons, either directly or through drift.

Only protected workers may be in the area during application. For any requirements specific to your State or Tribe, contact the State or Tribal agency responsible for pesticide regulation.

**Agricultural USE REQUIREMENTS**

Use this product in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, ranches, nurseries, and greenhouses, and handlers of agricultural pesticides. If contains requirements for training, decontamination, emergency response, and other specific instructions and requirements. See the statements on the label about Personal Protective Equipment (PPE) and the restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard (WPS).

There is a restricted-entry interval of zero hours for this product.

**NON-AGRICULTURAL USE REQUIREMENTS**

The requirements in this box apply to uses of this product that are not within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

There are no restrictions.

The active ingredient in this product is exempt from the requirement for a tolerance when used as a molluscicide in or on all food commodities.

Read Entire Container Label Before Using This Product.

People and pets may enter the area immediately after product is applied.

**HOW TO APPLY:**

Scatter the slug and snail bait granules on the soil around or on the plants to be protected. Do not apply to the leaves of self-seeded plants such as leafy greens and herbs. May be applied with other baits or fertilizers of similar particle size. Apply the higher rates if the area is heavily watered or after long periods of heavy rain. Reapply as the bait is consumed or at least every two weeks.

Do not place in piles. See specific directions for different plant types. Do not apply to plants if the area is heavily watered or after long periods of heavy rain. Reapply as the bait is consumed or at least every two weeks.

Do not apply to the leaves of self-seeded plants such as leafy greens and herbs. May be applied with other baits or fertilizers of similar particle size. Apply the higher rates if the area is heavily watered or after long periods of heavy rain. Reapply as the bait is consumed or at least every two weeks.

**WHERE TO APPLY:**

Treat all likely areas of infestation, especially around perimeters of plots where pests travel into plant areas from daytime refuge sites. Slug/snail bait is spread on the soil around the plants or as a mound in the plant area. Do not broadcast or aerially apply.

Broadcast or Aerial Application: Uniformly apply granular (granular spreader) or aerially calibrated to give the correct dosage within the application rates on this label. For aerial application, weather conditions should be such that the bait reaches the treated areas. Do not use broadcast or aerial application on sensitive soft leaved plants such as leafy greens or lettuce.

When to apply: Apply when slugs and snails are active. This will usually mean treating during periods when evening frost is no longer likely. Check under rocks and other horizontal surfaces in contact with moist soil for snails that are actively immigrating in the daytime. Examination of the soil and accompanying vegetation can indicate a serious problem. Snails and slugs feed almost entirely at night, so the best time to treat is late afternoon or just before dusk and when temperatures are cooler. Snails are less active during the day. Application will diminish the recurrence of slug or snail infestation. Can be used up to and including day of harvest.

Just one slug or snail can hatch up to 40 or 80 eggs respectively, every 4-8 weeks. One application protects plants up to 2 weeks.

**STORAGE AND DISPOSAL**

Do not contaminate water, food or feed by storage or disposal.

**PESTICIDE STORAGE:** Store this product in its original container and keep in a secure storage area out of reach of children and domestic animals.

**PESTICIDE DISPOSAL:** Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

**CONTAINER HANDLING:** Nonrefillable container. Do not reuse or reﬁll this container. Offer for recycling, if available, to proper collection facilities. Do not contaminate water, food or feed by storage or disposal.

**GENERAL INFORMATION**

Bait is effective against a wide variety of slugs and snails and will provide protection to home lawns, gardens, greenhouses, outdoor ornamentals, vegetable gardens, fruits, berries, citrus, crop and seed plants. The baits can be scattered on the lawn or on the soil around any vegetable or seed crops, flowers or fruit trees or bushes to be protected. The slugs and snails controlled by this product include (but are not limited to) bacterial, anglican, basil, cherry, clay, fir, jack, moose, marmot, mint, oregano, sage, thyme. Scatter the bait around the perimeter of the area to provide a protective “barrier” for slugs and snails entering the plot or field. If slugs or snails are inside the row, scatter the bait on the soil around the base of the plants and between the rows.
