

Turf Supreme 16-6-8 *plus*

Turf Supreme *plus* Trimec Herbicide AND ONE SHOT: Turf Supreme *plus* Trimec & Dimension

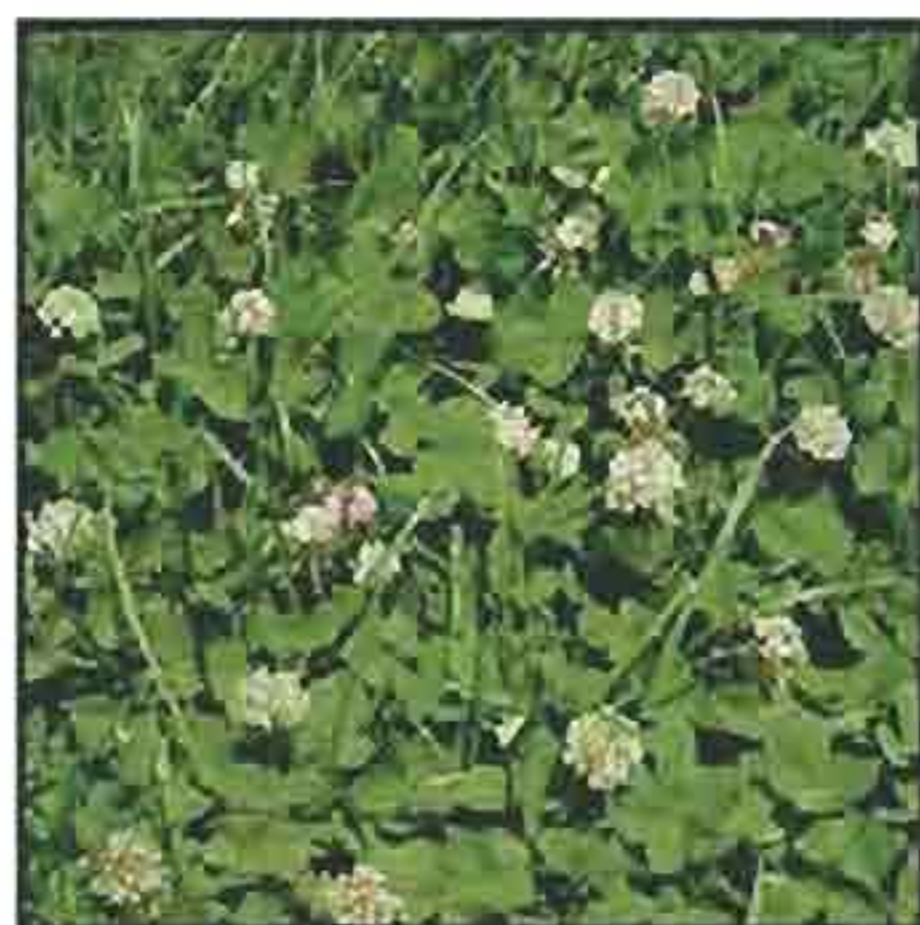

Both Turf Supreme 16-6-8 plus Trimec and One Shot combine postemergent weed control for existing broadleaf weeds in turf with high quality nutrition. Formulated by industry leading turf specialist at BEST® Fertilizer, Turf Supreme 16-6-8 plus Trimec and One Shot have demonstrated characteristics that:

- ♦ Fertilize and control broadleaf weeds in one easy step
- ♦ Greatly reduces the possibility of damage to desirable plants from spray drift
- ♦ Are very convenient in small area where it is not practical to use large spray rigs
- ♦ Eliminate time lost from cleaning spray tanks
- ♦ And One Shot will also control new weed seeds from germinating with Dimension, a premium preemergent

In addition to fertilization, both Turf Supreme 16-6-8 plus Trimec and One Shot will control the four common weeds displayed below along with over 34 other turf-damaging weeds.

Oxalis

Clover

Spurge

Dandelions

In order to perform correctly, both Turf Supreme 16-6-8 plus Trimec and One Shot **must** be used in accordance with all label instructions. In order to apply correctly:

1. Mow the turf 1-2 days before the application.
2. Irrigate the turf the day before the application.
3. Apply this material when the turf is wet, either from dew or from a short sprinkle by irrigation, so that the material will stick to the leaves.
4. Do not wash off for 1-2 days (no irrigation or rainfall).
5. This Product works **SLOWLY**. Be Patient.
6. Apply these products to turf only!

Apply these products at 4 lbs. per 1000 sq. ft. or 175 lbs. per acre.

One 50-lb. bag will cover 12,500 sq. ft.

3 ½ 50-lb. bags will cover 1 acre.

Do not apply to Dichondra, Carpetgrass, closely-mowed Bentgrass or St. Augustine turf.

Apply **only** to turfgrass areas, never to ornamentals as they will be damaged or killed.
