MICRONUTRIENTS

Micronutrients are an essential part of growing quality, high yielding crops. Che-Plex brand micronutrients are a blend of EDTA and citric chelates to improve plant availability when foliar applied. Che-Plex brands are formulated to mix with other NPK foliar fertilizer blends without tying up in the spray tank. The Che-Plex formulation allows for improved availability to the growing crop when foliar applied. Micronutrients are best utilized when spoon fed to the crop throughout the growing season and the Che-Plex brand is built to improve uptake when foliar applied.

CROP/RATES

Refer to the appropriate Che-Plex micronutrient label for the desired rate by crop.

APPLICATION TIMING

Refer to the appropriate Che-Plex micronutrient label for correct application timings.
