

BIOSCIENCE PLANT HEALTH

Use Rate: 1/2 – 4 pt/A in a single application

(Can do multiple applications. Please refer to label)

AnovA® is a specialty fertilizer derived from plants for plants. The amino acid complex and polypeptides in AnovA are the building blocks for proteins that help fight off stress crops may encounter throughout the growing season. This unique product helps the plant mitigate abiotic stress while tank mixing exceptionally well with insecticides and fungicides. AnovA has proven to provide consistent, positive results in multi-year studies when commercially used in numerous crops.

Use Rate: 1 – 4 qt/A

Thrive® checks all the boxes when it comes to delivering a robust foliar nutritional product. Thrive is an 8-21-6-0.05B-0.10Cu-0.20Fe-0.10Mn-0.0005Mo-0.10Zn that also includes a humic/fulvic component that improves nutrient uptake and availability. Thrive delivers both ortho and poly phosphate along with an amino acid package that improves enzyme function. There are few offerings that match up to the value Thrive delivers.

Use Rate: 2 – 3 gal/A

Delivered K Plus™, a 3-0-20-13S-0.1B-0.2Mn-0.05Zn is an excellent foliar applied nutrient blend designed for dicot crops. Delivered K Plus delivers plant essential nitrogen and potassium along with a robust micronutrient package specifically designed to meet late season reproductive nutrient demands.

CROP CARE FUNGICIDES

Use Rate: 7 – 7.5 fl oz/A

Active Ingredients: Azoxystrobin + Difenoconazole

A dual mode of action fungicide that controls a broad disease spectrum.

Use Rate: 6 fl oz/A

Active Ingredients: Pyraclostrobin + Difenoconazole

A dual mode of action fungicide that provides optimal disease control through translaminar and systemic uptake.
