

BIOSCIENCE PLANT HEALTH

Use Rate: 1 - 3 gal/A

Novus® B is a 25-0-0 liquid nitrogen fertilizer containing the patented slow release nitrogen (SRN) compound triazone, which enhances nitrogen absorption, translocation and remobilization within the plant. Novus B also contains 0.5% boron for increased nitrogen metabolism within the plant while helping to increase fruit development in all crops.

Use Rate: 1 - 3 gal/A

Novus® K is a 20-0-6 foliar triazone nitrogen product with excellent nutrient absorption characteristics. Novus K also contains key micronutrients like 3% sulfur, 0.25% boron and 0.10% iron, all critical in a balanced fertility plan. Novus K is an excellent late season, crop safe, reproductive foliar choice that couples well with fungicide applications.

Use Rate: 1 - 2 gal/A

Delivered K Plus™, a 3-0-20-13S-0.1B-0.2Mn-0.05Zn is an excellent foliar applied nutrient blend designed for dicot crops. Delivered K Plus delivers plant essential nitrogen and potassium along with a robust micronutrient package specifically designed to meet late season reproductive nutrient demands.

Use Rate: 2 - 4 qt/A

Thrive® checks all the boxes when it comes to delivering a robust foliar nutritional product. Thrive is an 8-21-6-0.05B-0.10Cu-0.20Fe-0.10Mn-0.0005Mo-0.10Zn that also includes a humic/fulvic component that improves nutrient uptake and availability. Thrive delivers both ortho and poly phosphate along with an amino acid package that improves enzyme function. There are few offerings that match up to the value Thrive delivers.

Use Rate: 1/2 - 4 pt/A in a single application

(Can do multiple applications. Please refer to label)

AnovA® is a specialty fertilizer derived from plants for plants. The amino acid complex and polypeptides in AnovA are the building blocks for proteins that help fight off stress crops may encounter throughout the growing season. This unique product helps the plant mitigate abiotic stress while tank mixing exceptionally well with insecticides and fungicides. AnovA has proven to provide consistent, positive results in multi-year studies when commercially used in numerous crops.

CROP CARE FUNGICIDES

Use Rate: 13 - 22.7 fl oz/A

Active Ingredients: Azoxystrobin + Tetraconazole

A broad-spectrum, systemic fungicide with preventative and curative activity. Formulated with DRV technology, driving more active ingredient into the plant leading to the most effective disease control.

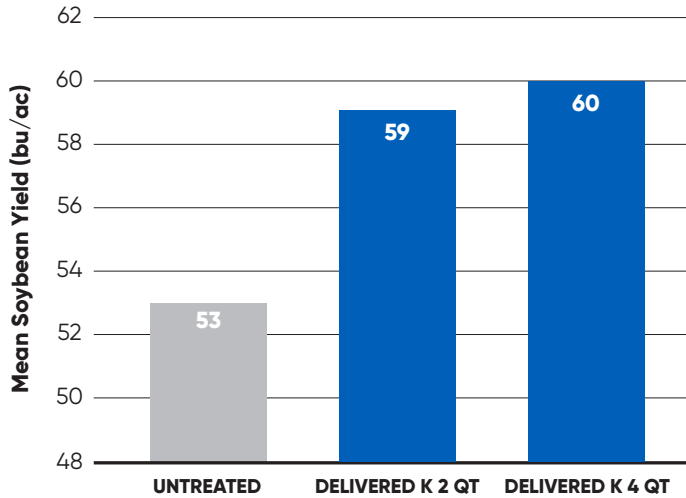

Use Rate: 6 fl oz/A

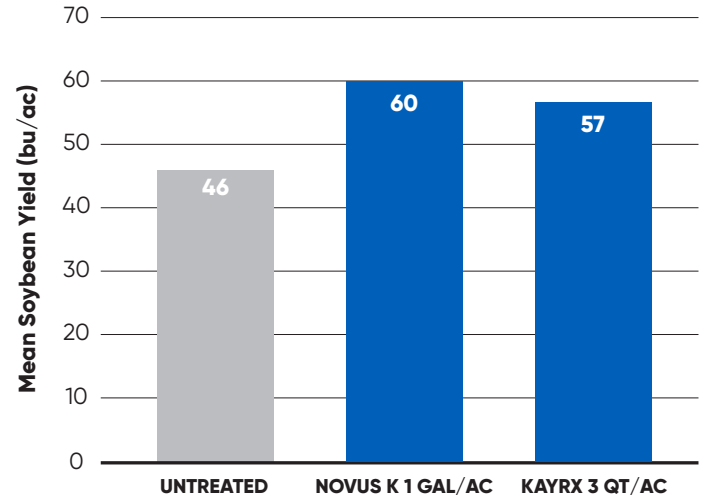

Active Ingredients: Pyraclostrobin + Difenconazole

A dual mode of action fungicide that provides optimal disease control through translaminar and systemic uptake.

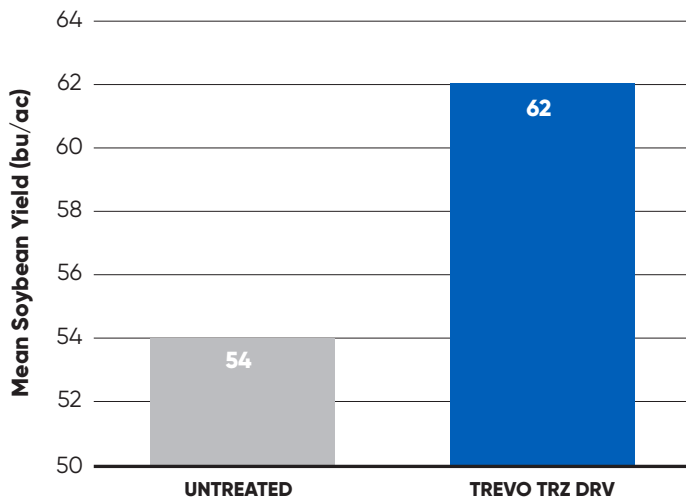

SOYBEAN YIELD RESPONSE – DELIVERED K

SOYBEAN YIELD RESPONSE TO POTASSIUM

SOYBEAN YIELD RESPONSE TO FUNGICIDE

Soybean Trial – Ames, IA
Soil Texture: Loam
Application Timing: R2

Utilize Verify tissue sampling to correctly choose the nutrient product that best fits the crops nutrient need to maximize yield during late season applications.
