

Deviator™ is a high-powered polymer product coupled with an organic acid package. Deviator helps protect phosphate from getting tied up with cations like calcium, magnesium, aluminum, and iron, while maximizing NUE and agronomic ROI.

BENEFITS

- Amino acid-based polymer and organic acid package
- Polymer interacts naturally with roots
- Coating helps protect phosphate from tying up with cations
- Organic acids help increase phosphate solubility and availability

USE RATES

Dry fertilizer – 3 qts/ton

Liquid fertilizer – 1 to 4 gallons/100 gallons (liquid phosphate fertilizer)
