

SALIVATOR®

When producing a crop, every drop of water matters agronomically and financially. Yet all too often, much of the irrigated water is lost to the crop because it doesn't reach or remain where it is most needed. That's why managing water in the plant root zone is so critical. Salivator® is an exceptional surfactant, designed and built to improve water distribution and retention.

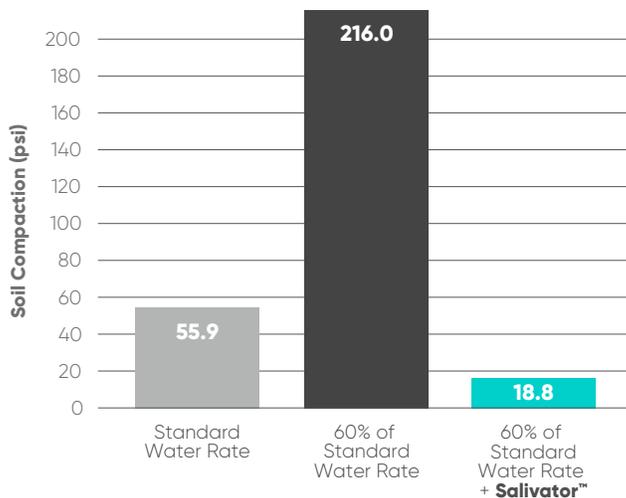

BENEFITS

- Improves water distribution throughout the soil profile
- Increases water retention
- Aids in decreasing compaction, runoff, and leaching

APPLICATION TIMING

At planting or as required throughout the growing season. Repeat applications as necessary

COMPACTION

REDUCED SOIL COMPACTION

Salivator™ reduced the compaction of soil by 3.71 psi with a 40% reduction in water use.

USE RATES

- **1st application:** 1 qt/A
- **Following applications:** 1 pt/A

Multiple crop use

Hydration Surfactant & Infiltration Surfactant
