ORGANIC ADVANCEMENTS

ORGANICS

SOILCAL™

Calcium is an essential nutrient for crop production that's needed for cell structure, formation of cells, cell membranes, cell division, cell elongation, and soil structure. SoilCal™ is an organic, 12% calcium derived from calcium chloride, that can be applied as a nutritional or as a soil amendment through irrigation or other equipment with other select products.

BENEFITS

- Organic, 12% calcium solution
- Nutritional product or soil amendment
- Can be applied through the water or other equipment

USE RATES

Please see label for crop uses and rates.

COMPATIBILITY

- Do not use with phosphate or sulfur containing solutions – precipitation may occur

SOIL AMENDMENT

- Apply 25 gallons of SoilCal per acre for every ton of gypsum

IRRIGATION WATER AMENDMENT

- Apply 10 to 15 gallons of SoilCal through irrigation water starting early season or as needed to prevent excessive runoff or standing water.
- Typical applications are between 25 and 50 gallons per acre, per season, depending on soil conditions
