

SPARVATO™

Water availability and usage is an ever-evolving issue and challenge in the agricultural community across the United States. Improving yields with less resources will always be a priority. Sparvato™ delivers a solution in the water management space. Sparvato is an organically derived, water management tool. Sparvato facilitates nutrient and water absorption, and does an excellent job of increasing the soils water holding capacity. By increasing water holding capacity, Sparvato improves water use efficiency, plant health and yield.

BENEFITS

- Organic water management tool
- Facilitates nutrient and water absorption
- Increases the soils water holding capacity
- Improves water use efficiency, plant health, and yield

APPLICATION METHOD

Soil, foliar or in transplant solutions

USE RATES

SOIL

- 16 oz/A Broadcast

FOLIAR

- **Dilute sprays:** 16 Fl. Oz per acre in 100 gallons of solution
- **Concentration sprays:** 8 oz/A in at least 25 gallons of solution

ACCUMULATED WATER WEIGHT LOSS OVER TIME
