

# SPECIFY

Specify provides a balanced supply of micronutrients and other bioactive compounds that leads to more robust and uniform plant development while optimizing a crop's potential. Specify is a blend of nutrients and fermentation metabolites. Specify provides crops with essential nutrition for optimal root growth and reproductive formation, contributing to larger fruit size, improved uniformity and enhanced quality characteristics such as color and brix.

## BENEFITS

- Fermentation technology for improving harvest quality and yield in fruit and vegetables
- Improved marketable quality including color, uniformity and brix
- Increases reproductive formation and retention for greater crop yields
- Stimulates plant processes
- Based on nutrigenomic research

## APPLICATION TIMING

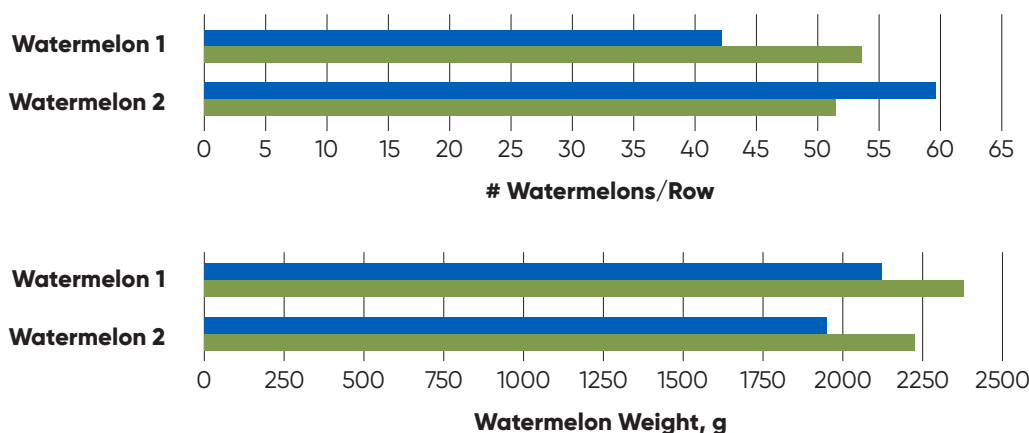

- Foliar
- Refer to label recommendation base on crop

## USE RATES

**6 - 48 oz/A**

Multiple crop use

### SPECIFY IN WATERMELON

- **Specify™** was applied at bed cover in Watermelons
- 6 field locations
- 12 fruits/location
- Assessed in mid-August.
