

VIADUCT™

Zinc 9%

1-0-0

Viaduct™ Zinc 9% is an innovative Innvictis BioScience® foliar micronutrient, complexed with amino acids. Because of its unique nature, Viaduct Zinc is rapidly absorbed by the plant, satisfying nutrient need, demand, and utilization.

Zinc serves as a crucial component of various enzymes related to growth hormones including auxin production as well as metabolic processes. Zinc is also involved in chlorophyll production and formation, which directly impacts a plant's ability to photosynthesize and process energy, ultimately converting that energy into building blocks for growth. Additionally, zinc is essential for plant development and growth, which assists with proper seed formation and maturation.

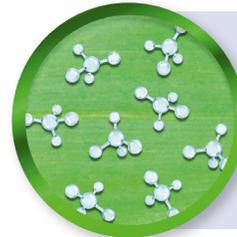

BENEFITS

- Zinc complexed with amino acids
- Rapid nutrient absorption and uptake
- Aids in the movement of nutrients and helps increase nutrient utilization
- Low risk of phytotoxicity
- Organic chelating agent
- Biodegradable

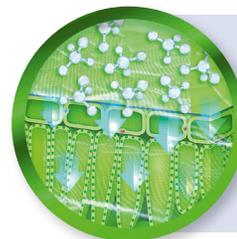

USE RATES

APPLICATION	RATE
Foliar	1 - 4 pt/A
Soil	1 qt - 1 gal/A

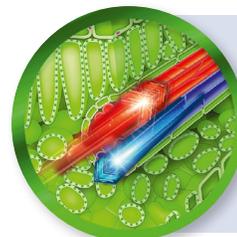

HOW IT WORKS

Secondary nutrients and micronutrients formulated or complexed with amino acids

Rapid absorption and uptake of secondary nutrients and micronutrients

Once the secondary nutrient or micronutrient is inside the plant, its quickly transported inside the cells and the plant cell enzymes are able to break it down, satisfying nutrient need, demand, and utilization.
