

 **VITALIPHITE® K**  
**0-0-20**

Potassium is an essential macronutrient and it has several key roles in crop production. It is associated with the movement of water, nutrients, and carbohydrates within the plant. It's involved with select enzymatic processes, it helps with the opening and closing of the stomata, and it enhances the translocation of sugars and starch. Vitaliphite® K is a potassium based phosphite foliar fertilizer. It was designed to enhance nutrient uptake, increase K utilization, and maximize agronomic ROI. Vitaliphite K can also be applied in a soil application.

## BENEFITS

- Increased nutrient availability
- Rapid uptake and utilization
- Mobile within plants
- Increased exudates
- Increased root mass and vegetation

## APPLICATION

**Soil application:** 1-5 qts/acre

**Foliar application:** 1-8 pts/acre

*Can be applied at 7-14 day intervals, at a maximum of 5 times during the growing season*
