

VOLTERRA®

VolTerra is a unique combination of NBPT and DCD, helping protect nitrogen above and below ground from volatilization, denitrification, and leaching, maximizing nutrient use efficiency and agronomic ROI.

BENEFITS

- Helps protect nitrogen from volatilization, denitrification, and leaching
- Helps with nitrogen stability, increasing plant uptake
- Increases nutrient use efficiency
- Can easily be impregnated on urea or tank mix with UAN
- One low use rate for urea and UAN
- Improved dry time in cold climates
- Eliminates mixing and multiple product handling
- Helps minimize amount of total nitrogen in ground water and helps reduce contaminants

APPLICATION TIMING

Refer to label
Utilize tissue samples for best results

USE RATES

Urea Use Rate: 3-4 qts/ton

UAN Use Rate: 1.5 – 2.5 qts/ton

– For use in all crops with UAN and Urea

UNTREATED

150 units of UAN
side dressed at V4.

VOLTERRA

150 units of UAN plus 2 qts/ton
of VolTerra side dressed at V4.

VolTerra Treated Fertilizer Blend
