

FORTIFY™

SPREADER / STICKER / SURFACTANT / DEPOSITION AID

A water dispersible, nonionic spreader-sticker adjuvant that is formulated to improve the efficiency of a broad spectrum of pesticides by increasing droplet spreading and adhesion onto plant leaf surfaces. Increases herbicide, insecticide, and fungicide efficacy.

BENEFITS

- Decreases water surface tension to increase coverage while forming a protective film to adhere active ingredients to plant surfaces
- Sticking properties help lower wash-off of spray deposit caused by rainfall or irrigation
- Improves deposition and lowers off-target drift with a more uniform droplet pattern

ACTIVE INGREDIENTS

Alkyl polyoxyethylene ethers, polymerized resins, and triethanol amine salts of oleic acid (TOFA derived)	20.7%
Petroleum distillates	2.5%

DIRECTIONS FOR USE

MAY BE USED BY GROUND OR AIR APPLICATIONS

RATES PER 100 GALLONS SPRAY MIX	
Defoliants, Desiccants, Herbicides	1 to 4 pints
Fungicides, Acaricides, Insecticides	¼ to 2 pints
Wettable Powders	½ to 3 pints
