

Simplot Grower Solutions has the personnel, equipment, products, and expertise to help protect your crop and maximize yield potential. The plant health recommendation below combines an effective pesticide application and delivers critical nutrition to boost plant health, control damaging insects and diseases, and provide your soybean crop with essential nutrients during the reproductive stage of the growing cycle.

**6 oz/A**

Innliven™ TRZ is a fast acting, dual mode of action fungicide that controls over 30 major crop diseases. Innliven TRZ contains pyraclostrobin and tetraconazole, a unique combination exclusive to Innvictis. With its combination of preventative and curative activity, Innliven TRZ delivers long lasting disease control with increased plant health. Innliven TRZ controls a variety of diseases in a diverse set of crops.

**3.84 oz/A**

Ravage® contains lambda-cyhalothrin which is a broad-spectrum pyrethroid insecticide that provides a fast knockdown with residual control of the most damaging insects including stinkbugs, aphids, thrips, mites, and worm and looper species.

**1 qt/A**

Thrive® 8-21-6 is a complete nutritional package, containing multiple phosphate sources and EDTA chelated Cu, Fe, Mn and Zn, each bringing unique value to the crop. The benefits of Thrive include stimulated root development and growth, EDTA chelates to help protect the micronutrients from reacting with other materials in the soil, increased nutrient uptake, and improved enzyme function.

**0.5 pts/A**

AnovA® 5-0-0 is derived from plants, for plants. AnovA is an amino acid complex in the form of polypeptides. AnovA helps mitigate stresses that plants may encounter at different growth stages during the growing season, increases nutrient absorption through the roots and leaves, and promotes root growth, development, and plant vigor.
