

**PAVADO™
TBZ**

Pavado™ TBZ is a broad-spectrum, systemic fungicide offering a premix of prothioconazole and tebuconazole. Pavado TBZ provides proven control over key diseases in wheat and barley helping to protect yield potential. Pavado TBZ is an excellent rotational and tank mix partner ensuring a sustainable approach to any IPM program.

BENEFITS

- Excellent activity on leaf and head diseases including Fusarium Headblight (Head Scab) and rusts
- Convenient premix of proven actives in cereal disease management
- Consistent performer in protecting yield and grain quality preservation
- Provides both curative and preventative properties against the most resilient diseases
