

# Bedazzled

## Kentucky Bluegrass

### You Have to Have this Variety In Your Blends!

The whole purpose of blending is to broaden genetic diversity, not narrow it. Bedazzled Kentucky Bluegrass is an excellent choice as a mono-stand and a blending variety. Bedazzled is classified as a "compact-america" type which means it has high disease resistance, can be mowed as close as 1/2 inch, and is resistant to many diseases including powdery mildew and has slower growing habits for reduced mowing.

➤ **RATED #1** in Turf Quality on the 2001 & 2002 NTEP Turf Trials

➤ **Great for Sports Fields, High Traffic Areas & Sites Where Recuperative Abilities are Needed**

➤ **AquaWise - Accepted by Turfgrass Water Conservation Alliance for Exceptional Drought Tolerance**

➤ **Slower Growth Habit Ideal for Golf Course Fairway & Sod Production**

### What is a "Midnight Type"?

A compact type with similar leaf texture and mowing potential. These elite Bluegrasses have produced attractive, saleable sod wherever bluegrass is adapted.

## 1 Best Turf Quality

Overall best turf quality at 33 NTEP locations in 24 states two years running! Color, texture, and disease resistance make this variety a top choice for any sod, sports or high profile landscape.

## 2 Slow Growth Habit

As a compact type, Bedazzled lends itself to lower mowing heights and reduced vertical growth. This increases maintenance saving to professional turf managers and golf course superintendents.

## 3 Disease Resistance

After years of domination by Midnight and the Midnight types, Bedazzled broke the stronghold with new genetics. Since Bedazzled had no incidence of Powdery mildew, it is an excellent variety to blend with the very susceptible Midnight or midnight types.
