**USES**

- For specific application rates follow the recommendation of a qualified individual or institution, such as, but not limited to, a certified crop advisor, agronomist, university crop extension publication, or apply according to recommendations in your approved nutrient management plan.
- Each granule contains an accurate portion of all plant food nutrients guaranteed on the label providing a uniform supply of

nutrients to any crop. It is especially effective on vegetable crops.

**ADVANTAGES**

- AGROPELL by Simplot AVAIL 15-15-15 with 10% Sulfur should be used at the same rates as non-coated AGROPELL by Simplot 15-15-15 with 10% Sulfur. Avail for Granular phosphates (Patent No. 6,525,155), a non-plant food ingredient designed for coating on granular phosphate fertilizers, sequesters antagonistic ions in the soil surrounding the fertilizer granule, reduces tie-up of phosphate, and makes phosphate more available to the plant. Avail increases phosphate availability through all stages of plant growth, including early development, the most crucial period for increasing yield potential. Avail is water soluble and biodegradable. If undisturbed, Avail continues to inhibit phosphate fixation throughout the growing season.
- Is a highly concentrated homogeneous fertilizer pellet that contains 10% sulfur and a 1:1:1 ratio of N-P-K.
- Note the Sulfur content of 10%. Each ton of product contains 200 pounds of sulfur. When applying, common application rates for N-P-K, it will also provide the sulfur requirements for many crops. An important factor – the sulfur is in the sulfate form – a readily available plant nutrient.
- The high concentration of plant food results in dollar savings in storage, transportation, and application.
